

## Billions of People (Including Doctors) Opted Out of Taking Covid-19 Vaccine

Covid vaccines induce a wide variety of diseases: [Parry et al 2023](#). The risk of Covid-19 fatality is statistically 0 for people under 70, which comprise 94% of the global population: [Pezzullo et al; 2023](#). According to official government pharmacovigilance reporting systems worldwide, millions have already died after participation in this liability-free, genetically targeted drug experiment with unknown long-term results: [Mostert et al; 2024](#). There was no excess mortality until the vaccines were rolled out, and for every 800 injections, one person will die: [Rancourt et al; 2024](#). Vaccine mediated adverse effects are attributed to the spike protein itself: [Troughakos et al; 2022](#). Given the extensive, well-documented serious adverse events and unacceptably high harm-to-reward ratio, scientists urge governments to endorse a global moratorium on the modified mRNA products until all relevant questions pertaining to causality, residual DNA, and aberrant protein production are answered: [Mead et al; 2024](#). By January 2022, as a result of Covid vaccine mandates, [Dr. Theresa Long](#) reported an 1100% increase in deaths in our military ([DMED](#)).

Unprecedented vaccines are expected to take 12.5 years to develop and have a 2% probability of success: [Young et al; 2018](#). Many aspects of Covid-19 vaccine development are unprecedented. Covid vaccines were first to use PEG (polyethylene glycol) in an injection, despite PEG antibodies being widespread (with a prevalence up to 72% in the population: [Hong et al; 2020](#)), and PEG being commonly linked to severe reactions and impairment of therapeutic efficacy: [Lila et al; 2018](#). Covid-19 vaccines represent the first coronavirus vaccine attempted in humans; the first to use mRNA vaccine technology against an infectious agent, the first injection of genetically modified polynucleotides in the general population; the first time Moderna brought a product to market; the first to have public health officials telling vaccine recipients to expect an adverse reaction; the first to be implemented publicly with nothing but preliminary efficacy data; and the first vaccine to make no claims about reducing infections, transmissibility, or deaths: [Seneff et al; 2021](#). The mRNA-LNP platform's lipid nanoparticle component is highly inflammatory: [Ndeupen et al; 2021](#).

Like flu shots, Covid-19 vaccine cannot prevent infection, because the respiratory tract is compartmentalized and functions independently of the systemic immune system: [Bleier et al; 2020](#). Intramuscular vaccines inducing serum antibodies (IgG and circulating IgA) and not secretory IgA (in the mucus cells of the respiratory tract) cannot protect the upper airways (respiratory mucosal layer) where the virus enters. Systemic injection, which predominantly induces circulatory IgG antibodies and, potentially, cytotoxic T cells, is poorly effective at generating mucosal immune responses: [Russell et al; 2020](#). Immune T cells do not control pulmonary virus replication: [Yang et al; 2004](#). S-protein based SARS-CoV vaccine increased viral infectivity of human cell lines in vitro: [Kam et al; 2007](#) | [Jaume et al; 2011](#) | [Wang et al; 2014](#). Prevention of infection by targeting the receptor-binding domain of the spike protein was never possible: [Sui et al; 2014](#) | [Li et al; 2020](#) | [Lu et al; 2020](#).

Increases in Covid-19 are unrelated to levels of vaccination across 68 countries and 2947 counties in the United States: [Subramanian et al; 2021](#). There is a greater chance of mutation diversity in the vaccinated population (evolutionary pressure that drives Covid-19 variants): [Al-Khatib et al; 2022](#).

Individuals who have had SARS-CoV-2 infection do not benefit from Covid-19 vaccination: [Shrestha et al; 2021](#). Previous SARS-CoV-2 infection provides greater protection than that offered by the single or double/triple dose vaccine: [Diani et al; 2022](#). The effectiveness of Covid-19 vaccine becomes negative (meaning the vaccinated are more likely to be infected than the unvaccinated) within five months, and the vaccine diminishes superior, robust and long-lasting natural immunity acquired from recovery from infection: [Lin et al; 2022](#) | [Föhse et al; 2021](#).

The higher the number of vaccines previously received, the higher the risk of contracting Covid-19: [Shrestha et al; 2023](#). Possibly due to immune imprinting (aka original antigenic sin—a phenomenon whereby the body only strongly and biasedly recalls out-of-date antibodies), boosters do not work: [Baker et al; 2024](#) | [Wang et al; 2022](#). Sera obtained from individuals vaccinated with third-dose monovalent, fourth-dose monovalent, BA.1 bivalent, and BA.5 bivalent mRNA vaccines exhibited very little or no antiviral effects. Additionally, monoclonal antibodies did not exhibit antiviral effects: [Uriu et al; 2023](#) | [Yang et al; 2023](#).

Self-reactive antibodies (autoimmune disorders) are generated following exposure to the spike protein: [Wang et al; 2014](#) | [Lyons-Weller; 2020](#). Multiple vaccinations impair the immune system and overturn protective immune memories by promoting adaptive immune tolerance: [Gao et al; 2022](#) | [Irrgang et al; 2022](#) | [Uversky et al; 2023](#) | [Haralambieva et al; 2024](#) | [Boretti; 2024](#) | [Valk et al; 2023](#) | [Yoshimura et al; 2023](#) | [Kalkeri et al; 2024](#) | [Seneff et al; 2022](#) | [Schiepers et al; 2023](#) | [Akhtar et al; 2023](#). Induction of IgG4-switched humoral responses may permit extended viral persistence: [Sheehan et al; 2023](#). Covid vaccine causes immune imprinting (i.e. the immune system becomes less effective due to repeated stimulation): [Collier et al; 2023](#) | [Chemaitelly et al; 2023](#) | [Wang et al; 2023](#) | [Branche et al; 2023](#) | [Röltgen et al; 2022](#) | [Vinicius Pinto Costa Rocha et al; 2024](#). Antibody dependent enhancement also occurs in children (i.e. they may have a worse response to potential infection if they have been previously vaccinated). BNT162b2 vaccination in children alters cytokine responses to heterologous stimulants: [Kobbe et al; 2024](#).

Risks associated with blood transfusions from genetic vaccine recipients: [Ueda et al; 2024](#).

Misreading of the modRNA sequence due to pseudouridine in the vaccine causes formation of unintended proteins in 1 in 4 cells, generating an adverse autoimmune response: [Mulrone et al; 2024](#) Off-target antigen translation was confirmed by Pfizer's own researchers: [Patel et al; 2023](#). Long-lasting, biochemically modified mRNA and its frameshifted recombinant spike proteins persist in tissues and circulation after vaccination: [Boros et al; 2024](#).

Real-Time Self-Assembly of Artificial Constructions from Pfizer and Moderna: [Lee et al; 2024](#) | [Mihalcea](#). Rise of RNA machines—self-amplification in mRNA design: [Comes et al; 2023](#). Graphene oxide, a key ingredient in DARPA patented hydrogels, and unique MAC addresses have been found in the vaccinated: [Noack; 2021](#) | [Campra; 2021](#) | [Benito; 2021](#) | [Cao et al; 2020](#).

Covid-19 vaccine impairs semen concentration and motility: [Gat et al; 2022](#); and sperm may be completely replaced by spike protein: [Burkhardt; 2023 \(@ 1hr 23 min\)](#). Menstrual disturbances are occurring worldwide after Covid-19 vaccination: [Edelman et al; 2022](#) | [Toktas et al; 2023](#) | [Alahmadi et al; 2022](#) | [Muhaidat et al; 2022](#) | [Farland et al; 2023](#) | [Barabás et al; 2022](#) | [Baena-Garcia et al; 2022](#) | [Sualeh et al; 2022](#) | [Taskaldiran et al; 2022](#) | [Quejada et al; 2022](#) | [Qashgari et al; 2022](#) | [Al Kadri et al; 2023](#) | [Kaijwara et al; 2023](#) | [Wesselink et al; 2023](#) | [Blix et al; 2023](#)

Expectant mothers who took Covid vaccine had a significantly higher rate of abortions, oligohydramnios, abnormal placentas (size and location), abnormal fetal growth, problems breastfeeding, blood pressure problems, and more cases of malaise, headaches, chest pain, breathing problems, and sleep problems than the unvaccinated: [Amer et al; 2024](#). Low birth rates: [Chudov](#). Autism: [Erdogan; 2024](#). A worldwide moratorium on the use of Covid-19 vaccines in pregnancy is advised until randomized prospective trials document safety in pregnancy and long-term follow-up in offspring: [James Thorp](#) | [Jessica Rose](#).

mRNA vaccines are correlated with melanoma, lymphomas, leukemias, kidney, colorectal, breast, lung and liver cancers: [Dalglish; 2023](#) || [Risch; 2023](#). Spike protein immunoglobulin G4 antibodies are linked to cancer progression: [Raszek et al; 2024](#). SV40 promoter in Pfizer vaccine is a sequence used to drive DNA plasmids into the nucleus, promoting cancer development: [Bhakdi; 2023](#) || [McKernan; 2023](#). This is even more concerning because mRNA spike protein binds p53 and other cancer suppressor genes: [Zhang and El-Deiry; 2024](#).

SARS-CoV-2 RNA is reverse-transcribed and integrated into the human genome: [Zhang et al; 2020](#). The route to genome integration of vaccine mRNAs via endogenous L1 retroelements is easily conceivable: [Domazet-Lašo; 2022](#). Covid spike proteins persist indefinitely suggesting DNA integration: [Bellavite et al; 2023](#) || [Dhuli; 2023](#). Covid vaccine causes permanent damage to the immune system that is heritable to offspring: [Qin et al; 2022](#). DNA/human genome integration from Covid vaccination is possible: [Buckhaults; 2023](#) || [McKernan; 2023](#). Covid vaccine permanently modifies DNA 6 hours after initial injection, as mRNA is reverse transcribed intracellularly into DNA: [Aldén et al; 2022](#), and alters expression of over 500 genes: [Murata et al; 2022](#) || [Jiang et al; 2021](#) || [Satar et al; 2022](#). DNA contaminants may integrate into the human genome: [König et al; 2024](#).

The hearts of people who took Covid vaccine have an unusually high demand for glucose: [Nakahara et al; 2023](#). Spike protein fatigues and impairs mitochondria of heart cells: [Van Tin et al; 2024](#) || [Huyhnh et al; 2023](#). These immunostimulatory gene-based pro-drugs falling in the category of immunological-genetic products elicit the immune response along with serious side effects on the cardiovascular system: [Bellevite et al; 2023](#). One in 35 vaccinated people had elevated troponin levels, and women experienced vaccine associated heart damage more often than men: [Müller; 2023](#). Cardiologists [Aseem Malhotra](#) and [Peter McCollough](#): Covid-19 vaccination causes heart damage, decreasing life expectancy, and must be halted until further investigation. 60% of patients <30 years old diagnosed with vaccine-associated myocarditis persisted at least 6 months: [Jain et al; 2024](#). Cardiovascular manifestations were found in 29.24% of vaccinated adolescents, ranging from tachycardia or palpitation to myopericarditis: [Mansanguan; 2022](#). Covid vaccination is strongly associated with a serious adverse safety signal of myocarditis, particularly in children and young adults, resulting in hospitalization and death: [Rose et al; 2024](#).

Vaccine spike protein can induce clotting and strokes: [Lei et al; 2021](#) || [Kolahchi et al; 2022](#). Embalmers report long fibrous clots since 2021: [Hirschman](#).

Manufacturers skipped critical safety testing on vital organs. Autopsies and biodistribution studies show spike RNA crosses the blood-brain barrier and is found in the heart, ovaries, spleen, liver ([Fertig et al](#)), breast milk ([Hanna et al](#)), placenta ([Gonzalez](#)), lymph nodes ([Roltgen](#)), and circulates in the blood indefinitely ([Castruita; Kent; Brogna; Patterson](#)).

Patents pre-dating the pandemic: [US Patent 10,703,789B2](#), [US Patent 7776521B](#), [WO 2020060606](#)

Moderna Inc., a DARPA-funded company that had never brought any product to market, patented ([US Patent 9,587,003; 2017](#)) the 19 base letter nucleotide sequence which codes for the Furin Cleavage site in Covid-19: [CTCCTCGGCGGGCACGTAG](#). Moderna also patented the complementary sequence CTACGTGCCGCCGAGGAG. On December 16, 2013, Moderna applied for 4 patents: US9149506B2, US9216205B2, US9255129B2, US9301993B2. ([Daily Mail](#))

During 2020-2023, one of the world's largest open-access journal publishers, London-based Hindawi, which publishes over 200 peer-reviewed journals across multiple disciplines, [retracted over 10,000 papers](#) due to manipulation by coordinated peer review rings whereby reviewers and editors coordinated to get papers through peer review. In 1979, the WHO and the CDC redesigned the [International Classification of Diseases \(ICD\)](#) coding list and removed any possibility for the world's coroners to label a cause of death related to vaccination.

### Why Use Religious Vaccine Exemptions

"Papers, please." Exemptions became necessary due to failure to learn from history, blind obedience to perceived authority, disregard for HIPAA patient privacy protections, and lack of adherence to ethics around medical experimentation and proper fully informed consent. Despite high demand, [CA Senate Bill 276 \(2019\)](#) prohibits doctors from writing medical vaccine exemptions, and you could only potentially qualify **after** a serious documented injury. Exemptions may still be denied by the government. <1% of vaccine injuries are reported ([Harvard Lazarus Audit](#)), and [Bill AB2098](#) attempted to silence physicians. Religious objections are becoming more common. Example of premise for religious objection to vaccination:

Let no man deceive you. Father of lies deceived all the nations with pharmakeia sorcery. Genetic modification (transhumanism) is expressly prohibited in the bible. Chimeric beasts are considered abominations. Covid vaccine alters human DNA (cited above). Satan will have finally succeeded in imitating the incarnation. Genesis 3:15. We have a double helix DNA structure with 144,000 genes; 72,000 from each parent. [US Patent 10,703,789 B2](#) Sect. 74 lines 6 & 7 (Moderna's Covid vaccine patent; filed June 2019) explicitly states the ideal result is formation of a triplex DNA structure (this could be the mark of the beast). The Supreme Court ruled that parts of a human genome modified by mRNA drugs are eligible for patent protection ([Myriad Genetics, 2013](#)). Every Covid vaccine on the market uses immortalized cells from aborted children ([Children of God for Life](#)). I remain unapologetically unmodified genetically. I oppose a biosurveillance security state via vaccine mandates and passports, and a One World Government Digital Antichrist Beast System (World Economic Forum: Great Reset). (expanded with citations: see [VaxExemption.org](#))
